SIR:

In response to the final Office Action dated April 20, 2001, please consider the following remarks.

REMARKS

Applicants traverse the rejections of claims 1-20 based on Virtanen et al. (U.S. Patent 5,536,526), Olinger et al. (5,204,115), Schwartz et al. (U.S. Patent 5,958,471) and Mizumoto et al. (U.S. Patent 5,576,014).

Rejections Under 35 U.S.C. 102

Applicants maintain that neither Virtanen et al. nor Olinger et al. anticipate the claimed subject matter (tabletting aid, compositions thereof and methods of synthesis) in that these references neither disclose nor teach a tabletting aid produced by dissolving xylitol in a solvent followed by spray drying or fluidized bed granulation.

The process step of dissolving the xylitol in a solvent does have patentable weight and does distinguish the products of these references. Applicants claim the tabletting aid using product by process language. Reliance on such language is necessary to define the homogenous distribution of xylitol and polyol in the tabletting aid that is manifested by the improved tabletting performance illustrated in the Examples. In Example 1 products obtained from spraying drying a solution of xylitol are compared with products obtained by mechanical mixing. This difference in properties illustrates that without the
